Colombia numbers altogether 11 custom districts; by land toward Venezuela, Cucuta toward Ecuador, and Carlosama toward Brazil El Viento. Along the coast are 8 custom-houses; on the Pacific, Buenaventura and Tumaco; on the Atlantic, Riasucio, Tolu, Cartagena, Savanilla, Santamarta, and Rio Hacha. Each ocean-coast has one free port—Panama and Colon. The scarcity of roads fit for transportation limits the field of supervision by custom officers, the *personnel* of which, in 1871, consisted of 51 only, namely: 11 custom-house collectors, 11 cashiers, 9 warehouse watchmen and weighers, and 20 clerks and book-keepers. The income and cost of this branch of revenue show:

The tariff of Colombia imposes import duties by weight only; it divides all goods into three dutiable classes, the fourth class constituting the articles exempt from duty. The first class pays 5 cents per kilogram, increased from 3½ cents; the second class pays 20 cents per kilogram, reduced September, 1870; the third class pays 45 cents per kilogram, increase from 30 cents. Salt pays but 2 centaros per kilogram.

The total imports consists of:

Foreign Trade in 1871.

[From the Prussian Commercial Archives.]

In the following statements distinction is made between the direct or interoceanic and the indirect or coastwise trade.

According to the above report of the Swiss telegraphic administration for the year 1872, the number of telegraph-offices amounted, on January 1, 1871, to 546; on January 1, 1872, to 628; and on December 31, 1872, to 707. These numbers show, during these two years, an increase of one hundred and sixty-one offices. The greatest increase in the year 1872 was in the months of June, July, August, and December. The average increase was seven offices per month. In the year 1871 the whole number of interior dispatches was 2,818,626, and in 1872 amounted to 2,983,597, showing an increase of 164,971. It is to be mentioned that the first quarter of the year, when compared with the same period of the former year, showed a decrease; but, on the other hand, the third quarter of 1871 (traveling season) showed a total sum of 838,161 interior dispatches, while, during the same quarter in 1872, 1,035,269 telegrams were forwarded.

The deficit of 164,434 dispatches, in the months of January, February, and March, is the result of the late war, which took place on the Swiss borders; but it was sufficiently covered by the increase of 197,108 telegrams during the traveling-season of 1872. In the international service there was a nominal increase of dispatches, but here, too, are the same differences observed as in the interior service. So, in the first quarter of 1871, 152,584 dispatches have been forwarded, while, during the corresponding quarter of 1872, only 126,018, making a difference of 26,566 in favor of 1871. On the contrary, the number of telegrams forwarded in the third quarter of 1871 amounts to 180,768, and in the same quarter of 1872 to 213,621, thus showing a difference of 32,853 in favor of 1872.

---

* In "number of dispatches" are comprised the dispatches received as well as sent off.

† The extraordinary fluctuations which may be noticed in the "receipts" proceed from the occasional settlements of accounts with foreign companies.

The financial result of the two years were as follows:

	1871.	1872.
Total earnings	$296, 378	$335, 035
Total expenses	271, 200	328, 166

The scale of depreciation adopted by Congress, referred to in the above table, is found in the following resolution adopted by the Continental Congress March 18, 1780:

"That silver and gold be receivable in payment of the said quotas at the rate of one Spanish milled dollar in lieu of forty dollars of the bills now in circulation."

The issues began May 10, 1775, and ended 1781. The depreciation commenced in 1777, and in March 1780 had reached the rate of forty dollars in currency for one of silver, when Congress passed a resolution to fund them as above, and to pay interest on the certificates. But the depreciation in the market still went on, and they were passed at times at the rate of $1 for $1,000, or more. By law, in 1791, at $100 for $1 of the bills out, they were permitted to be still funded. (Document No. 15, House of Representatives, first session Twenty-eighth Congress.)

The following table is compiled from information in the same document, furnished therefor by Mr. Woodbury, formerly Secretary of the Treasury, and shows for different periods the value of one dollar in specie expressed in currency, and of one thousand dollars in currency expressed in specie. The standard of specie in this table is the Spanish milled dollar of average market weight and fineness.

DATE.	Nominal currency value.	Specie value.	Nominal currency value.	Specie value.	DATE.	Nominal currency value.	Specie value.	Nominal currency value.	Specie value.
March 1, 1778	$1 75	$1	$1,000	$571·43	March 18, 1780	$40 00	$1	$1,000	$25

September 1, 1779	18 00	1	1,000	55·56					

It will be seen that the two tables substantially agree, up to March, 1780. After that date Washington's account follows the scale fixed by Congress, and Mr. Woodbury's table the market-prices of the currency.

COMMERCIAL REPORTS AND MISCELLANY.

GREAT BRITAIN.

NEWCASTLE-UPON-TYNE.

[From the report of Mr. Consul Jones on the trade and industry of Newcastle-upon-Tyne, dated September, 1872.]

SIR: I have the honor to submit the following report, comprising a brief account of Newcastle, the Tyne and its improvements, advantages and disadvantages; the light-dues; the importance of Newcastle, North and South Shields as ports of entry; the commercial intercourse carried on between this river and the United States; the alkali trade, etc. * * * * * * * * * * The various tables given in connection with the different subjects treated in the report have been prepared with care, and can be relied upon with confidence.

NEWCASTLE.—Newcastle-upon-Tyne, as its name indicates, is situated upon the river Tyne, ten miles west of where that river flows into the North Sea. Formerly Newcastle was the chief town of the county of Northumberland, but by virtue of a charter granted by Henry IV, in the year 1400, it became a county in itself, and is represented in Parliament by two members.

At the last census, taken in 1871, the population of this town was 128,000, to which we must add 34,000, the population of Gateshead; for notwithstanding the last-named place is in the county of Durham, its interests are identical with Newcastle, and in a commercial point of view we must consider them as one.

The two towns are divided by the river Tyne, and united by three large bridges, including the High-level Bridge, one of the engineering triumphs of Robert Stephenson.

The source of the great wealth of Newcastle and district, which includes North and South Shields, is the rich coal-beds found in the immediate neighborhood. Not only does this commodity contribute towards the prosperity of the Tyne directly; we are also indebted to its cheap price, in all probability, for the establishment upon the banks of this river of some of the most complete and extensive engineering works to be found in the United Kingdom, if not in the world. I particularly refer to the Elswick engine and ordnance works of Sir William G. Armstrong & Co.; the ship-building establishment of Messrs. C. M. Palmer & Co., at Jarrow; the factories of Messrs. Robert Stephenson & Co., and Messrs. R. & W. Hawthorn, for the manufacture of locomotives and other engines and machines, together with some of the largest chemical works in the country.

THE TYNE.—I have repeatedly been informed by masters of American ships that in former years the entrance into the Tyne was both difficult and dangerous, and that the channel of the river was in a shallow and otherwise unsatisfactory condition. I need not remind you that such a state of things must have proved a check both upon the shipping interests and the general commercial growth of the district. Thanks to the river Tyne commissioners, causes for complaints, under this head, no longer exist.

I extract a few brief passages from the "report of Captain E. K. Calver, royal navy, on the improvements effected in the river Tyne." He says:

"The depth of the channel over the bar, which was 6 feet 8 inches in 1849, had been increased by dredging to 15 feet in 1865, the time of one of my periodical examinations. Now there is no bar, as a depth of 27 feet exists along the track in from sea, till the proper channel of the river is reached.

"There is now a minimum depth of 24 feet in that portion of the entrance channel where the 'stones,' with 9 feet over them, formerly existed.

* * * * * * * * * * * * * *

"Briefly stated the result is, that the commissioners have, by the process of dredging, cleared away the bar—they have freed the throat of Shields Harbor from the obstructions which nearly blocked it up—they have removed seven extensive shoals from out of the channel of the river between Shields and Newcastle, and increased the ruling navigable depth between the same limits from 2½ feet to 13 and 14 feet, while, by the consequent tidal gain, they have created a power for assisting in the future maintenance of the increased capacity of the river. These results, of national as well as of local importance, establish the Tyne as the most noteworthy example of river improvement within the bounds of the United Kingdom."

No one questions but what these truly wonderful improvements have greatly contributed toward making the Tyne what it is, and has been for several years, the third among the great shipping rivers of the kingdom, in the number and tonnage of vessels entering and clearing.

LIGHT-DUES.—The only thing remaining which militates against this port is the light-dues upon the shipping.

The Trinity House, under whose auspices these dues are collected, was incorporated by royal charter in the reign of Henry VIII. This warrant empowered the corporation to appoint officers, build light-houses, and collect light-dues upon shipping. The act of incorporation was confirmed by the successive reigning powers of this country until it was surrended to Charles II. A new charter was issued by his successor James II, in 1685, substantially the same as the original; "this is the charter under which the Trinity House enjoys and exercises its several rights to this day."

I find from a return made by this corporation in 1822, that they collected an average rate of 90,000 pounds ($4,356,000) per annum for three years, on 23 of their light-houses; while the sum necessary for the maintenance of these edifices amounted to only 38,000 pounds, ($183,920,) leaving the handsome margin of 52,000 pounds, ($251,680.)

To show how the Tyne suffers in a comparative sense from the operations of the Trinity House light-dues, I will extract from the report of James Hall, esq., of Newcastle, already quoted from:

"Among the many anomalies in the mode of application of the light-dues, your committee would only point to one instance to show the irregularity of the principle that seems to guide the Trinity House. A vessel of 300 tons register sailing from the Tyne to Bergen, Norway, is subject to a charge of £5 10*s.* 11*d.* for light-dues, being at the rate of 8$\frac{14}{16}$*d.* per ton, while, if sailing from either of the adjacent ports of Seaham, Hartlepool, Middlesbro', or Stockton, the charge would only be 1*s.* 7*d.*, or at the rate of $\frac{2}{16}$*d.* per ton, and from Whitby at the rate of $\frac{5}{16}$*d.* per ton, notwithstanding the fact that such vessel, proceeding from any of the ports south of Newcastle, must pass the lights at the mouth of the Tyne.

"In the coasting coal trade, (the great nursery for seamen,) competition is now greater than ever, and while a steamer of 1,000 tons engaged in that trade, trading for instance, to Havre, will pay, during twelve months, an aggregate of £281 5*s.* for light-dues, which is equal to £2 per cent. upon her gross earnings, a vessel of similar tonnage sailing from the Thames to India, with a valuable freight on board, will not pay more than £15, or three-tenths per cent. on her probable earnings for the voyage out and home. And thus the light-dues are mainly derived from a class of shipping least able to support such a tax."

I close this subject by stating that strong efforts will again soon be made to get the Trinity House light-dues system abolished; and all expenses for erecting and maintaining light-houses, light-ships, buoys, and beacons on the coast of Great Britain and Ireland, defrayed out of the Government treasury.

SHIPPING.—Having endeavored to speak of Newcastle and its history, the Tyne and its improvements, the district and its industries, advantages and disadvantages, in a general way as comprehensively as the brevity required would permit, I now beg leave to submit the following tables showing generally the amount of commercial intercourse carried on between Great Britain and the United States, and specially between the Tyne (viz, Newcastle, North Shields, and South Shields) and our country during the year 1871.

It will be observed that the amount of direct trade carried on between the Tyne and the United States is comparatively small. Our position on the eastern shores of the island is the cause thereof. Merchants are not satisfied that such a trade would pay, with London, and especially Liverpool, and other ports on the west coast to compete with. We have one steamer, the St. Olaf, under the Norwegian flag, which makes regular trips to the United States, as follows: She takes in freight in the Tyne for New York, touching at Norway for passengers for the same port, taking freight for London and the Tyne (if such a consignment can be found) on her return voyage.

EXPORTS.—The exports from the Tyne to the United States consist chiefly of coals, chemicals, and iron. The following table exhibits the quantities of all goods so exported during 1871, with the prices of the several articles at this date, (September, 1872.)

IMPORTS.—The importations to the Tyne from the United States are scarcely of sufficient importance to be mentioned, simply because we have no regular oceanic intercourse. An extensive tobacco manufactory uses American leaf by tons; we are large consumers of American flour, cheese, bacon, and fruit, yet every bale, box, and barrel reaches us via Liverpool by rail.

During two years we have had only two entries on the Tyne from the United States, viz: 470 barrels of tar, in 1870, and 52 hundred-weight of butter, in 1872.

The following table indicates the kind and quantities of goods imported into this river during the years 1870 and 1871, from all countries, showing the increase and decrease of the traffic in each particular commodity:

THE ALKALI TRADE.—As I have already shown in a table which gives the quantities of goods shipped from the Tyne to the United States, the alkali trade forms by far the most important branch of the commerce carried on between this district and America. Soda crystals, alkali, and bicarbonate of soda are continually going forward to all the larger ports on the Atlantic coast, and occasionally to San Francisco.

Cheap fuel has induced capitalists to establish some of the largest chemical works in the kingdom upon the banks of this river.

Taking three largest manufactories in the district, viz, the Jarrow Chemical Company, the Tyne Chemical Works, and the works of H. L. Pattinson & Co., I find that together they manufactured during the year 1871, 40,607 tons of soda crystals, 34,720 tons alkali, (refined and unrefined,) and 8,153 tons bicarbonate of soda, besides large quantities of caustic soda, chloride of lime, pearl hardening, and oil of vitriol.

The alkali trade is in a thriving condition. Either through sagacity, or by good fortune, the manufacturers made large contracts for both salt and coal before the late advance in the prices of those articles took place, and by consequence they are now reaping a rich harvest.

In former years the outlay attending the transportation of salt from the Cheshire beds was nominal; the charges of railway companies to Hull and Grimsby were at a very low rate, and at those places the article was taken in as ballast by vessels bound for the Tyne. However, such a state of things no longer exist; railway charges are high, and regular freight is charged by all vessels bringing salt from Hull and Grimsby to this river; and to-day the price of that article is 27*s* ($6.53) per ton, with an upward tendency. Small coal, which is chiefly used in the manufacture of this class of chemicals, is at present commanding 20*s.* ($4.84) to 25*s.* ($6.05) per ton. I need scarcely add that these figures are considerably in advance of those at which the fortunate contracts were made.

If manufacturers engaged in what is generally known as the alkali trade were obliged to pay current prices for salt and coal, I conjecture that decomposing the chloride of sodium would yield but a very moderate profit.

The following tables, showing the extent of this trade during 1866, both on the Tyne and in the Lancashire district, will enable you to comprehend its importance in the employment of capital and labor, and as a source of emolument to this country:

The above quantity of 936,000 tons of raw materials is of the value of £863,425, ($4,178,977,) being exclusive of all materials used for building, plant, and repairs. The nature of the acids and gases employed causes rapid destruction of the latter, which, in consequence, require constant repairing and renewal.

Upward of 6,000 men are employed, (September, 1872,) in the alkali trade on the Tyne.

Removal of Prohibition of Export of Saltpeter.

[Accompanying a dispatch from Mr. De Long to the Department of State.]

[Translation.]

TOKEÉ, 20TH OF 1st MONTH, *6th Year Meiji.*

According to one of the articles in the Treaty between your country and ours, the exportation of Saltpeter is prohibited, and I have now the honor to inform your excellency that this prohibition has been removed, and that saltpeter will be allowed to be exported the same as any other commodity. The export duty upon it has been fixed at 5 per cent. ad valorem. Should circumstances lead the Government to desire to re-establish the prohibition upon the exportation of saltpeter, thirty days' notice of that intention will be given you.

With respect and consideration,

SAYESHMIA TONEOMI,
Minister for Foreign Affairs.

His Excellency C. E. DE LONG,
Envoy Extraordinary and Minister Plenipotentiary of the United States.

PRELIMINARY STATEMENTS.

BRAZIL.

[Dispatch from Mr. Partridge to Mr. Fish, dated March 24, 1873.]

United States Legation, (Petropolis,)
Rio de Janeiro, *March* 24, 1873.

Sir: Of the whole amount of receipts into the Brazilian treasury, about $49,000,000, (97,000 contos,) about 20,000 contos of reis ($10,000,000) are derived from an export duty on all articles and produce shipped from the empire. This duty is assessed at 9 per cent. on their custom-house valuation, and, with the provincial export tax, amounts to about 13 per cent.

Inasmuch as the exports from Brazil to the United States (coffee, sugar, rubber, rosewood, &c.) amount to about $35,000,000 annually, it follows that of this amount (the export duty being included in the cost on board) about $3,900,000, or nearly $4,000,000, being two-fifths of the whole export duty, arise from exports to the United States alone.

The receipts from duties on imports are estimated in the budget at about 54,000 contos of reis, or about $28,000,000.

Brazil takes from us annually only about $17,000,000 in value. It is not so easy to calculate what proportion of this receipt from import duties is received from such importations. But the import dues on certain articles exclusively from the United States are enormous, as the following example will show:

Kerosene costs in the United States 30 cents per gallon. The duty on kerosene here amounts to 5||080 ($2.70) per 10 gallons, or 27 cents per gallon, or 90 per cent.

Rosin costs in the United States about $1.80 to $1.90 per barrel. The duty in Brazil on rosin is about $1.50 per barrel, or 77 per cent.

Pitch in the United States costs about $2.60 per barrel. The duty in Brazil is about $1.85, or nearly 80 per cent.

Lard costs in the United States about 12 or 13 cents. The duty in Brazil is 80 reis per pound, (4¾ cents,) or 44 per cent.

The duty in Brazil on spirits of turpentine is 2||490 per box of 10 gallons, or about 38 per cent. of first cost.

The duty on flour is about 68 cents per barrel, costing about $8, or only about 8½ per cent.

Perhaps it would not be an exaggeration to say that on these $17,000,000 Brazil levies $10,000,000 duties.

On the other hand, the United States admits *free* of all duty *all* articles to the amount of $35,000,000 brought from Brazil, with the single exception of sugar, of which we receive perhaps $1,000,000 in value; and of wool, of which a small amount comes occasionally from Rio Grande do Sul.

* * * * * * *

Of the carrying-trade between the United States and Brazil we at present unfortunately have only about 33 per cent., or one-third, in American vessels, but Brazil has no share in this.

I am, sir, your obedient servant,

JAMES R. PARTRIDGE.

Hon. Hamilton Fish, *Secretary of State*, *Washington.*

Note.—The first cost, per pound, export duty, and cost on board of the coffee above is calculated on the mean monthly price of "first-good" coffee, and on the mean rate of exchange during the month. The best quality of coffee does not go to the United States. Cargoes for the United States are assorted, and generally of three (3) qualities. The first costing about from 1 to 1¼ cent per pound more, and the lowest about 1 cent per pound less than the medium quality, on the price of which the above calculation is based.

NOTE.—The cost per pound above, export duty, and cost on board is calculated on the mean monthly price of "first-good" coffee, and upon the mean rate of exchange during the month. The very best quality of Rio coffee is not shipped to the United States, but goes chiefly to the north of Europe. The cargoes for the United States are assorted, embracing three qualities. The first costing about 1 to 1¼ cents per pound more, and the lowest about 1 cent per pound less, than the medium, on which the above calculation is founded.

NOTE.—There is a comparatively small export of sugar from Rio, except to the southern ports of the empire, and some to the River Platte. The Campos sugar is grown in this province. It is from the northern ports, (Bahia, Maranham, and Pernambuco,) as cheaper producers and nearer Europe and the United States, that the great export of sugar is made. No sugar is exported from Rio to the United States. The whole export in 1871 was 3,772 boxes.
